

Instagram Engagement Strategy - Alfido Tech

Analyzed 257 posts, 8782 likes, 7488 comments, and follower relationships. Metric used: (likes + comments) / followers.

Important limitation

All post timestamps in this dataset are identical: 13-04-2023 08:04. So a real "best posting time" cannot be proven from this data. Any report claiming multiple best hours from this file would be fake. Use the plan below as a testing calendar, then optimize after 2-4 weeks of real posting data.

Data-backed findings

- Best content type by engagement/follower: photo (0.83).
- Content type differences are small: photo 0.83, video 0.83, carousel 0.82.
- Strong hashtag signals include #delicious, #beauty, and #foodie.
- Raw likes alone are weak; engagement per follower is the cleaner comparison metric.

Recommended testing content calendar

Day	Time	Post type	Goal
Monday	10:00 AM	Carousel: weekly tech tip	Saves + shares
Tuesday	7:00 PM	Photo/project result	Trust + proof
Wednesday	12:30 PM	Mini tutorial/reel/video	Reach
Friday	6:30 PM	Poll/question post	Comments
Saturday	11:00 AM	Behind-the-scenes/team post	Follower connection

5 engagement strategies

- Run the above calendar for 4 weeks; choose final posting times only after comparing engagement/follower by slot.
- Use 5-8 relevant hashtags from winning themes; avoid unrelated hashtag spam because it attracts low-quality engagement.
- Make every caption ask for one action: comment, save, share, vote, or answer a question.
- Repeat winning formats: project outputs, before/after improvements, student career tips, and quick tutorials.
- Track weekly: posts, likes/follower, comments/follower, saves/shares if available, and new follows after each post.
